In this lesson, students read about how animals adapt to their environment. We read about bird beaks and other adaptations. We also learned that an animal's body color and shape can help them survive. Below are some helpful files to look at (notes, vocabulary words, study guide):

Chapter 2 - Animal Growth and Adaptations

Many different animals have adaptations that protect them from predators. Some of these adaptations are behavioral, allowing them to act a certain way to avoid being seen by a predator. For example, sloths move very slowly through trees making them hard to spot. Their long, hairy bodies have algae growing on them to blend in with the trees.

Delve deep into ecosystems by classifying the beings that live there. Our resource breaks down the different kinds of animals before studying their different adaptations. Start off by answering the question: what do we classify? Then, break down this classification into kingdom, phylum, class, family, genus, and finally species. Compare the differences between warm-blooded and cold-blooded animals. Create a brochure on your favorite vertebrate before inventing your own invertebrate. Introduce the concept of adaptation and how animals have changed based on their environment. Take this further by conducting a case study on the adaptations of the koala. Finally, explore the concept of evolution and how this idea is backed up by fossil records. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.
