pressure differences to move fresh air through buildings. Pressure differences can be caused by wind or the buoyancy effect created by temperature differences or differences in humidity. In either case, the amount of ventilation will depend critically on the size and placement of openings in the building.

ventilation: 1. Natural ventilation is uncontrolled air movement from windows, doors, or cracks in the home. This used to be the most common ventilation method of allowing fresh outdoor air to replace indoor air in a home, and still is found in most older homes. Clockwise from top left: iStockphoto # ' s 12675768, 4319566,
