Now more than ever, the design of systems and devices for effective and safe healthcare delivery has taken center stage. And the importance of human factors and ergonomics in achieving this goal can't be ignored. Underlining the utility of research in achieving effective design, *Advances in Human Aspects of Healthcare* discusses how human factors and ergonomics principles can be applied to improve quality, safety, efficiency, and effectiveness in patient care. Topics include the design of work environments to improve satisfaction and well-being of patients, healthcare providers, and professionals. The book explores new approaches for improving healthcare devices such as portable ultrasound systems, better work design, and effective communications and systems support. It also examines healthcare informatics for the public and usability for patient users, building on results from usability studies for medical personnel. Several chapters explore quality and safety while others examine medical error for risk factors and information transfer in error reduction. The book provides an integrated review of physical, cognitive, and organizational aspects that facilitates a systems approach to implementation. These features and more allow practitioners to gain a deeper understanding of the issues in healthcare delivery and the role ergonomics and human factors can play in solving them.

Together with Consulting Editor Dr. Charles Lightdale, Dr. Jacques Van Dam has put together the first ever monograph that tackles the challenges of infection prevention by endoscopists and interventional endoscopists. Dr. Van Dam has selected authors who have learned valuable lessons in hospitals where antibiotic-resistant infections occurred as well as regulating bodies like the Food and Drug Administration (FDA) and the Centers for Disease Control and Prevention (CDC), who are trying to both resolve what happened and create, as much as possible, an evidenced-based response in an effort to protect the public. Articles are specifically devoted to the following topics: Introduction to Transmission of Infection: Potential Agents Transmitted by Endoscopy; Genetic Mutation and Natural Selection of Resistant Bacteria: How did We Get Here; Nosocomial Infections: A History of Hospital-Acquired Infections; Endoscope as Vector for Transmission Methods for Endoscope Reprocessing; Novel Algorithms for Reprocessing, Drying and Storing; Quality Systems Approach for Endoscope Reprocessing: You Don't Know What you Don't Know; Role of the FDA: From Device Regulation to Crisis Management; Hospital Outbreaks; Patient as Vector and Victim; Society Guidelines: Where is the Consensus; New-Age Antibiotics; Role of the CDC: From Hospital Outbreak to Crisis Management. Readers will come away with latest information they need to prevent infections in their endoscopy suites and hospitals.
