~~Parkinson's Disease: Theory and Practice for Nurses ...~~

A new theory of Parkinson's disease has been proposed. It suggests that rather than the condition starting in one location and progressively moving higher into the brain, Parkinson's disease may actually start everywhere and it is the varying levels of tolerance between different types of cells that determines which cells die first.

The PRIME-Parkinson model has a number of features of a complex intervention, as defined by the Medical Research Council : multiple components, whose application will be tailored differently according to the patient profile, as well as the unpredictable way in which these elements may interact with one another when combined within the context of clinical practice. Evaluation within the framework of a logic model, as described here, reflects our commitments to robust assessment of the ...
