In Winter World: The Ingenuity of Animal Survival, biologist, illustrator, and award-winning author Bernd Heinrich explores his local woods, where he delights in the seemingly infinite feats of animal inventiveness he discovers there. Because winter drastically affects the most elemental component of all life--water--radical changes in a creature's physiology and behavior must take place to match the demands of the environment.

From flying squirrels to grizzly bears, and from torpid turtles to insects with antifreeze, the animal kingdom relies on some staggering evolutionary innovations to survive winter. Unlike their human counterparts, who must alter the environment to accommodate physical limitations, animals are adaptable to an amazing range of conditions. Examining everything from food sources in the extremely barren winter land-scape to the chemical composition that allows certain creatures to survive, Heinrich's Winter World awakens the largely undiscovered mysteries by which nature sustains herself through winter's harsh, cruel exigencies.

Presents a detailed investigation into the feeding behavior of ravens during four winters in Maine and comes up with several unexpected conclusions.

A third edition of a classic work on cold climate ecosystems, updated with a new chapter on mammals and birds.

With these handy paperback reference guides, illustrated throughout with black-and-white line drawings, nature watchers know what to look for and how to interpret what they see. Whether carried into the field or consulted at home, these books provide readers with fascinating facts and insights into the behavior of birds and wildlife. And that's not all. With new Stokes projects under way ... with information about Stokes activities available on-line at www.StokesBooks.com...you can be certain that more and more readers will be relying on Stokes guides.

An award-winning, much-loved biologist turns his gaze on himself, using his long-distance running to illuminate the changes to a human body over a lifetime Part memoir, part scientific investigation, Racing the Clock is the book biologist and natural historian Bernd Heinrich has been waiting his entire life to write. A dedicated and accomplished marathon (and ultra-marathon) runner who won his first marathon at age thirty-nine, Heinrich looks deeply at running, aging, and the body, exploring the unresolved relationship between metabolism, diet, exercise, and age. Why do some bodies age differently than others? How much control do we have over that process and what effect, if any, does being active have? Bringing to bear research from his entire career and in the spirit of his classic Why We Run, Heinrich probes the questions of how we use energy and continue to adapt to our mutable surroundings and circumstances. Beyond that, he examines how our bodies change while we age but also how we can work with, if not overcome, many of these changes—and what all this tells us about evolution and the mechanisms of life, health, and happiness. Racing the Clock offers fascinating and surprising conclusions, all while bringing the reader along on Heinrich's compelling journey to what he says will be his final race—a fifty-kilometer race at age eighty.

"Bernd Heinrich is one of our greatest living naturalists in the tradition of Gerald Durrell....A national treasure." —Los Angeles Times Summer World is an intimate, accessible, and eloquent illumination of animal survival in the Summer months from Bernd Heinrich, bestselling author of Winter World and "our latter-day Thoreau" (Publishers Weekly). Pulitzer Prize-winner Edmond O. Wilson (On Human Nature) calls Heinrich's fascinating exploration and appreciation of the natural order a, "lovely book, meticulously etched and based on impassioned but exacting scientific research," while the New York Times Book Review raves, "Animals come to life in gripping detail...and so does Heinrich.... The man is irrepresible."

Heinrich involves us in his quest to get inside the mind of the raven. But as animals can only be spied on by getting quite close, Heinrich adopts ravens, thereby becoming a "raven father," as well as observing them in their natural habitat. He studies their daily routines, and in the process, paints a vivid picture of the ravens' world. At the heart of this book are Heinrich's love and respect for these complex and engaging creatures, and through his keen observation and analysis, we become their intimates too. Heinrich's passion for ravens has led him around the world in his research. Mind of the Raven follows an exotic journey—from New England to Germany, and from Montana to Baffin Island in the high Arctic—offering dazzling accounts of how science works in the field, filtered through the eyes of a passionate observer of nature. Each new discovery and insight into raven behavior is thrilling to read, at once lyrical and scientific.

A chronicle of the passing seasons in Central and Eastern Ontario designed to inform cottagers, gardeners, photographers, suburban backyard birders, and nature enthusiasts alike as to the natural events that can be expected each month of the year.

Successfully navigate the rich world of travel narratives and identify fiction and nonfiction read-alikes with this detailed and expertly constructed guide.

John Maynard Keynes once observed that the "ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood." The contributors to this volume take that assertion seriously. In a full-scale study of the impact of Keynesian doctrines across nations, their essays trace the reception accorded Keynesian ideas, initially during the 1930s and then in the years after World War II, in a wide range of nations, including Britain, the United States, France, Germany, Italy, Japan, and Scandinavia. The contributors review the latest historical evidence to explain why some nations embraced Keynesian policies while others did not. At a time of growing interest in comparative public policy-making, they examine the central issue of how and why particular ideas acquire influence over policy and politics. Based on three years of collaborative research for the Social Science Research Council, the volume takes up central themes in contemporary economics, political science, and history. The contributors are Christopher S. Allen, Marcello de Cecco, Peter Alexis Gourevitch, Eleanor M. Hadley, Peter A. Hall, Albert O. Hirschman, Harold James, Bradford A. Lee, Jukka Pekkarinen, Pierre Rosanvallon, Walter S. Salant, Margaret Weir, and Donald Winch.
